

CLAIMS

While the embodiments of the invention have been disclosed, certain modifications may be made by those skilled in the art to modify the invention without departing from the spirit of the invention.

The inventor claims:

1. A device in which to steam food comprising a base, four steaming containers, heating elements, timers, a top section, a power source, and \ heating means;

the separate steaming containers are placed in an upright fashion on the base and fit under the space for the top section;

the top section is equipped with four valves;

a rod, which is secured to the base of the device at the first end and threaded at the second end secures the parts of the device;

separate heating elements and timers are provided for each steaming container.
2. The top section as described in claim 1, wherein there is a valve in the top section for each steaming container.
3. The device as described in claim 1, wherein the

rod is molded as part of the base.

4. The device as described in claim 1, wherein separate timers are installed for each separate compartment.
5. The device as described in claim 1, wherein separate heating means is installed for each separate compartment.
6. The heating means as described in claim 5, wherein the heating means is a gas burner.
7. The heating means as described in claim 5, wherein the heating means is an AC circuit.
8. The device as described in claim 1, wherein the materials are non-corrosive.
9. The device as described in claim 1, wherein the materials are hard plastic.
